

Aerospace Maintenance Competition – PPG Semco Procedure

Each competitor will be handed two Semkits. The first Semkit will be mixed using a 388 mixer, and the second Semkit will be mixed using a 1088 CE mixer.

Once the material is mixed, the competitor will hand the semkit to their teammate working on the Sealants task.

The following QR Code can be used to see a video on how to mix a semkit on the 388 mixer:

The competitor will then remove cured sealants from a panel - two sides must be removed using PPG red scrapers and the other two sides using PPG glass filled nylon scrapers. Once all the sealant is removed, the time will stop.
